

Derma Frost Peel

Professional Use Only

Properties: Considered a “lunch-time peel”, Derma Frost has two strengths – 12.5% and 25%. A higher strength agent, salicylic has the benefits of alpha-hydroxy acid, but is more effective in the treatment of early to moderate photo aging.

Indications

- Sun damaged skin (actinic keratoses)
- Acne grades I and II, oily
- Pigmentation abnormalities
- Aging skin, fine wrinkles
- Rough, calloused skin
- Most Fitzpatrick types

Contraindications

- Aspirin or salicylic sensitivity
- History of being “highly allergic” to anything
- Pregnant or nursing baby
- Accutane® within the last year
- Antibiotics – topical or systemic
- Broken skin
- Laser surgery within the last twelve weeks
- Using glycolic acid products, Retin-A® or Renova® in the last 4 weeks

Professional Use:

Derma Frost can be performed in a series of three sessions spaced four weeks apart allowing for epidermal regeneration. During the procedure, a warming and stinging sensation will be experienced with little discomfort, however, following the treatment. Smoothness and tightness is felt on the skin immediately. Use caution with a patient who has labial herpes, seborrhea or atopic dermatitis.
