

Jessner Peel

Professional Use Only

Skin Type: pigmentation, acne, sun damage, lentigenes, hyperpigmentation, Fitzpatrick I-IV

Properties: Circadia's Jessner's Peel is a combination of 14% Resorcinol, 14% Lactic, and 14% Salicylic Acid. Since resorcinol is a peeling agent, the client will experience noticeable peeling or flaking approximately 3 to 4 days after the peel. Resorcinol will increase the amount of peeling experienced after a peel. Peeling is usually light to moderate and depends on the skin condition and depth of the peel.

Contraindications

- Allergies to resorcinol
- Retin-A® or Renova® within 4 weeks
- Allergies to aspirin or salicylates
- Laser resurfacing within last 6 months
- Accutane® within one year
- Hypersensitivity
- Dry and dehydrated skin or compromised lipid barrier
- Pregnancy or nursing
- Glycolic or salicylic acid within one week
- Herpetic breakout (cold sore)
- Open wounds or suspicious lesions
